

# Windows 10

## START MENU INFORMATION

# START SCREEN INFORMATION

A Start button, it has returned and it works. There are major modifications from older operating systems. One contrast is the presence of smart phone type tiles to the Start Screen of Windows 10. Another is accessing Settings from the Start Screen, also a complete Application and Program list is displayed on the Start Screen. The Power and File Explorer icons are still there, for your use.

Tailoring the Start Screen color, adding-removing tiles, turning off automatic tile updating, resizing tile area, resizing tiles, deleting the entire tile area, adding folders such as Documents, Pictures, Music, etc. are procedures that are found in in the Windows 10 Manual.

**Left Click** the “Windows Logo” on the Task bar (**red** arrow below) to open the Start Screen. Take a look. Play around.

*See Chapter 4 “How To’s” for Start Screen in the Windows 10 Manual.*
